

Vegie growing tips

*get your edible oasis
growing at home today*

Position > For best results your vegetable patch should receive at least 5 hours of full sun daily. Allow easy access for planting, maintenance and harvesting. Protect taller crops from prevailing winds.

Soil Preparation > Soil needs to be friable and well drained. A regular addition of compost will improve the soil structure and help to fertilise your plants.

Planting Out > Remove seedlings from the container carefully. Scoop a hole large enough for the root clump, place the seedling into the hole and firm gently into place. Water in well with a seaweed solution and protect with a snail and slug repellent. Keep seedlings well watered until established.

Watering and Mulching > Water your vegetables regularly. During hot weather plants will require deep watering daily. Apply a 5cm thick layer of Lucerne or pea straw to conserve water, suppress weeds and to add valuable Nitrogen to the soil.

Fertilising > Vegetables use a lot of energy in a short amount of time. A successful vegetable plot requires a balance of Nitrogen (N), Potassium (K) and Phosphorus (P) which are available in complete fertilisers, compost and specialty mixes. Plants use Nitrogen primarily for leaf production. Potassium and Phosphorus are important elements in flower and fruit development. Consult individual plant labels for details.

Pests and Diseases > Plants that are well-fed and hydrated are better able to combat pests and diseases naturally. Check your plants regularly and act at the first sign of trouble. Seek extra advice from your local garden centre.

Oasis® Pot Veggies

*superior
home grown
vegies for pots*

Oasis Pot Veggies seedling varieties are selected specifically for container growing. The Pot Veggies range includes Broccoli Bambino, cauliflower, cabbage, cucumber, lettuce, edible kale, tasty tomatoes and eggplant, chillies and capsicums, and succulent strawberries and watermelon. All varieties are available seasonally.

Superior Pot Veggies seedlings are grown to an advanced size so they are faster to mature. They are also available in fully bio-degradable pots for sustainable gardening at its very best.

Oasis Pot Veggies are compact, prolific, and look and taste great. All you need to start growing your own healthy produce is a pot (of the size recommended on the plant label) and a sunny balcony, patio or courtyard. Pot Veggies are also suitable for growing in the veggie patch.

To give your container-grown vegetables the best start in life use a general purpose Australian Standards potting mix and fertilise regularly according to label instructions. Pots may dry out very quickly in warm weather so water regularly and shade the container on very hot days.

Create your own edible Oasis®

with top quality Oasis® vegetable seedlings

If you've got a taste for healthy, home grown produce then now's the time to start growing with Oasis vegetable seedlings. Oasis vegetable varieties are vigorous, high yielding and full of flavour. In fact, Oasis seedlings are so strong and healthy you'll be thrilled to discover just how easy they are to grow.

And because Oasis selects only the very best varieties you can be sure you'll have great, nutritious, fresh produce right at your very fingertips. Now that's real economical fast food!

So, what are you waiting for?

Get your body and your budget in better shape today with top quality Oasis seedlings.

Tomato Patio Prize

Lettuce Mignonette Green

Oasis punnets

Plants grown in Oasis punnets have stronger root systems and are easier to establish due to reduced root disturbance.

Simply squeeze each punnet cell at the base, gently remove the seedling, plant out and water.

For your easy guide to which Oasis® seedlings to plant and when, simply refer to the table below.

Oasis has more than 100 vegetable varieties to choose from with fantastic options for the traditional vegie patch as well as the smallest of sunny courtyard and balcony gardens.
