

Oasis® Thumbs Up Varieties

For your easy guide to which Oasis® tomatoes to plant and when, simply refer to the table below

Apollo Improved
early fruiter

Beefsteak
large tomatoes

Black Russian
heirloom tomato

Father Tom
disease resistance

Grape Toms
deliciously sweet

Grosse Lisse
tender fruit

Health Kick
rich in antioxidants

Low Acid Yellow
unique colour

Mighty Red
high yielding

Pot Toms
tub tomatoes

Roma
rich tomato flavour

San Marzano
ideal for pots

Sweetbite
juicy fruit

Tommy Toe
cherry tomatoes

Tumbling Red
suits hanging baskets

Sweetbite	Tall	Sml cherry size	Early-Late	2m	Lots of fruit
Tommy Toe	Tall	Lrg cherry	Mid-Late	2m	Split resistant
Tumbling Red	Bush	Sml, sweet	Mid-Late	50cm	Heavy clusters

Give the Thumbs Up to a Top Act

Oasis has made it easy for consumers to choose between the huge range of tomato varieties available on the market by pulling the pick of the crop together into one easily recognisable range, Oasis Thumbs Up.

Oasis selects only the top hybrid varieties and better performing heirlooms for the Thumbs Up collection, so that gardeners can be confident of achieving higher yields from stronger, healthier plants.

Oasis® Tomato Tips

*get your edible oasis
growing at home today*

Planting > Tomatoes prefer a position that receives 5-6 hours of full sun each day and that is protected from cool winds and from frosts. Prepare your planting area by digging in organic matter into the top 15cm of soil.

Remove seedlings from the pot carefully, plant into soil at the same level as it was in the pot and water in immediately with a liquid fertiliser. Insert a stake or tomato trainer at the time of planting to prevent root disturbance. Use soft plant ties to avoid damaging the stems.

Fertilising > For best results feed your tomato plants regularly with a suitable soluble fertiliser making sure to follow directions. Once flowers appear, switch from a general purpose fertiliser to a specially formulated tomato fertiliser or one containing high levels of Potassium (K).

Watering > Water your tomatoes regularly and deeply. Water in the morning rather than at night. Applying a 5cm layer of pea straw or Lucerne after planting will help to retain soil moisture and also enrich the soil and suppress weeds.

Fruiting > Planting bright flowering annuals such as marigolds and nasturtiums may attract useful pollinating insects to your garden. Some gardeners also believe that these plants may repel unwanted garden pests.

Pests and Diseases > Keep your tomatoes healthy by ensuring that they are kept fed and well watered. To reduce the incidence of leaf spot and leaf blight avoid wetting the leaves. Always sterilise secateurs between plants when pruning. Protect young seedlings from slugs and snails.
